

TUSHAR SAURABH

AUTOMATION • OBSERVABILITY • AGENTIC AI

Senior Software Engineer | Hyderabad, India | tusharsaurabh.com | tusharacc@gmail.com | +91 9103607611

PROFESSIONAL SUMMARY

I build software that automates repetitive work, simplifies troubleshooting, and improves engineering effectiveness. I am currently exploring **agentic AI** to derive engineering insights from application telemetry, logs, and observability data, enabling more intelligent automation and operational decision-making.

SYSTEMS I'VE BUILT

AI Software Engineering Harness

Local-first multi-agent software engineering platform built on **Ollama**, coordinating planning, implementation, testing, code review, and verification. The execution harness independently validates generated code rather than relying solely on model responses.

Quantitative Investment Research Platform

Automated research pipeline for market-data ingestion, feature engineering, portfolio construction, optimization, backtesting, walk-forward validation, and performance analysis using Python.

Application Intelligence Platform (Ongoing)

Engineering workflows that correlate **Dynatrace** telemetry, application logs, and server metrics to derive actionable performance and reliability insights instead of relying solely on dashboards.

Home Intelligence Platform (Ongoing)

Raspberry Pi-based personal platform integrating personalized news, investment research, AI workflows, and home automation into an extensible system.

PROFESSIONAL EXPERIENCE

Chubb Business Services India

Jan 2024 – Present

Senior Site Reliability Engineer

- Design and develop custom engineering applications that automate incident resolution and operational workflows, including tools that allow recurring incident actions to be completed in a few guided steps.
- Troubleshoot complex production issues using WinDbg, memory-dump analysis, application telemetry, logs, and server-level diagnostics to identify root causes that are not evident through conventional monitoring alone.
- Build custom application-performance and reliability workflows using Dynatrace, logs, and server metrics to derive actionable insights rather than relying solely on pre-built dashboards.

Cognizant Technology Solutions (Client: Chubb)

Jul 2017 – Jan 2024

Senior Software Engineer

- Built automation, observability solutions, and engineering tooling using Python, PowerShell, JavaScript, and modern web technologies for a large enterprise insurance application.
- Used AppDynamics, OpenSearch, and Google Analytics to investigate application behavior, identify performance bottlenecks, and improve operational visibility.
- Collaborated with DevOps teams on CI/CD workflows and used Jenkins and Ansible as part of application deployment and operational automation.

Cognizant Technology Solutions (Client: Chubb)

Apr 2010 – Jul 2017

Senior Associate

Worked on enterprise insurance applications on IBM Mainframe and created automation workflows to reduce repetitive engineering work. In 2013, learned Python and moved into a custom web application, progressively expanding into web technologies and automation. This transition established the foundation for the modern application, production engineering, and observability work that followed.

Infosys

Jun 2006 – Apr 2010

Technology Analyst

Developed and supported enterprise mainframe applications, with COBOL and DB2 as the primary technologies. Created automation workflows to reduce repetitive development and operational tasks. Received the Infosys Excellence Award and Prima Award for contributions to project execution and delivery.

ENGINEERING TOOLKIT

Programming

Python • PowerShell • JavaScript • TypeScript • SQL

Observability & Troubleshooting

Dynatrace • AppDynamics • OpenSearch • WinDbg • Sysinternals Suite

Engineering & Automation

Git • GitHub • Jenkins • Ansible

AI Engineering

Claude Code • Ollama • OpenAI API • Playwright

Application Development

Node.js • Angular • Svelte • Pandas • NumPy

EDUCATION

University of Pennsylvania

Master of Computer and Information Technology | 2021 – 2024

AWARDS

Infosys Excellence Award

Prima Award — Project Execution

International Institute of Information Technology Hyderabad (IIIT-H)

Master of Science in Data Science (MSc DS) — In Progress
